Education

The University of Hong Kong

Ph.D. in School of Computing and Data Science

Hong Kong, China

Oct. 2025 – Sep. 2029 (expected)

Beijing University of Posts and Telecommunications / Queen Mary University of London

Beijing, China / London, UK

Dual-degree B.Eng. in Internet of Things Engineering; GPA: 87.9/100; First Class Honours

Sep. 2018 – Jun. 2022

Research Interests

- Physical AI, especially humanoid robotics and autonomous driving.
- Humanoid robot foundation models with transferability, compositionality, and contact awareness.
- 3D understanding under distribution shift, limited supervision, and long-tail scenarios.

Work Experience

Huawei Technologies Co., Ltd.

Research Intern, supervised by Jiaxin Peng

Jan. 2026 – Apr. 2026

Shenzhen, China

- Contributed to the World Engine project, focusing on behavior world model inference for scenario rollout and agent behavior prediction.
- Designed inference workflows for behavior-conditioned simulation, developing multiple inference mode, performed trajectory feasibility checks, and automated data generation.
- Conducted preliminary research for Huawei ADS and helped design a video-generation-based simulator for scalable autonomous-driving scenario synthesis and evaluation.

OpenDriveLab, Shanghai AI Lab

Research Intern, supervised by Li Chen

Jun. 2025 – Sep. 2025

Shanghai, China

- Researched generative world models for autonomous driving, focusing on controllable scenario synthesis for planning-oriented data generation.
- Generated diverse driving scenes with controllable traffic participants, road context, and interaction patterns to enrich long-tail training data.
- Used generated scenarios for planner post-training and analyzed robustness and generalization under rare and safety-critical cases.

ShanghaiTech University

Research Assistant, supervised by Yuexin Ma

Aug. 2022 – Apr. 2025

Shanghai, China

- Led research on 3D perception and reasoning for autonomous driving, spanning zero-shot point cloud segmentation, camera-based occupancy prediction, driving-knowledge evaluation, and end-to-end planning.
- Designed label- and memory-efficient methods, including multimodal fusion for zero-shot point cloud segmentation and octree-based occupancy querying for camera-only scene understanding.
- Built driving-knowledge benchmarks and human-like planning models, coordinating implementation, experiments, and manuscript writing across multi-author projects.
